## Eurofins Steins Laboratorium A/S

Ladelundvej 85  
DK-6600 Vejen  
DENMARK

**Any query regarding this certificate of analysis shall be addressed to Eurofins Steins + 45 7022 4286 or e-mail [food-kemi@eurofins.dk](mailto:food-kemi@eurofins.dk) regarding chemistry tests or [food-mikrobiologi@eurofins.dk](mailto:food-mikrobiologi@eurofins.dk) regarding microbiology tests.**

Results are only applicable for the sample as received. Results are stated "content in the sample", unless otherwise indicated. U(%): Expanded uncertainty of measurement (coverage factor k=2). Uncertainties regarding microbiological analyses can be requested by contacting the microbiological department. Information marked with (\$) is provided by the customer or enclosed/stated on the sample at reception and is the customers responsibility, including when it can affect the validity of the results. Results may not be reproduced except in full without written permission from Eurofins Steins. For all tests Eurofins Steins General Terms and Conditions of Sale applies; full text on [www.eurofins.dk](http://www.eurofins.dk)

**Legend**

CAS	The CAS Registry Number is a unique identifier assigned by the Chemical Abstracts Service to every chemical substance.
LOQ	Limit of quantification.
RL	Reporting limit.
LOD	Limit of detection.

PSP57-1		Pesticides according to ph. Eur. 2.8.13 in essential oils (ISO)	
Sampling / shipping requirements	Optimal quantity	200 g	Minimal quantity 150 g
<b>Content</b> (see appendix)	<a href="#">SPE41-2</a> (XB)	Pesticides Ph.Eur. Oils OC/PY	GC-ECD
	<a href="#">SPE42-2</a> (XB)	Pesticides Ph.Eur. Oils OP	GC-FPD
	<a href="#">SPE43-1</a> (XB)	Pesticides Ph.Eur. Oils MS	GC-MS
	<a href="#">ZPDX5-1</a> (XB)	Dithiocarbamate Ph.Eur	Spectrophotometry (UV/VIS)

## Appendix

SPE41-2 (XB)		Pesticides Ph.Eur. Oils OC/PY			
<b>Aim</b>	The substances mentioned within table 2.8.13 Ph.Eur. and USP 34 Art. 561 Table 5 and being analysable with Multi Residue Method DFG S19 are analysed within one test.				
<b>Method</b>	<p>The sample material is extracted with acetone. Before the extraction water is added to the sample material in an amount that takes full account of the natural water content of the sample so that during the extraction the acetone/water ratio remains constant at 2/1 (v:v) .</p> <p>For the liquid/liquid partition, sodium chloride and a mixture of cyclohexane and ethyl acetate are added to the homogenate, the mixture intensively mixed again and then allowed to stand for some time so that the phases can separate. A measured aliquot of the organic phase is dried with sodium sulfate and then reduced in volume. Equal volumes of ethyl acetate and cyclohexane are added in succession to the residue. The remaining water is removed with a mixture of sodium sulfate and sodium chloride and the solution is filtered. The extract is cleaned up by gel permeation chromatography (module GPC).</p> <p>For Pesticides detected with GC-FPD or GC-MSD, the GPC-eluate is used directly.</p> <p>For a gas chromatographic determination using an ECD, the GPC eluate is cleaned up further on a small silica gel column. . For this, the concentrated GPC eluate is added onto the small silica gel column and is eluted with solvents or solvent mixtures of increasing polarity. We are usually using the silica gel eluates 1+2.</p>				
<b>Applied on</b>	Essential oils, Plant oil or fat
